## Installing and Charging the Battery

Follow these steps to install and charge the main battery.

- Unpack the contents of the NEC MobilePro carton and locate the unit and the Lithium-Ion battery pack.
- Locate the release lock on the bottom of the system.
- Slide the lock to the unlocked position in the direction of the arrow.
- Put the Lithium-Ion battery pack in the bay and slide the battery in the direction of the arrow.

- Firmly press the battery until it is secure.
- Slide the lock back to the locked position.

NOTE: Be sure to slide the lock back to the locked position. The NEC MobilePro *will not* power on when the lock is in the unlocked position.

- Charge the main battery while you work or explore the software on your new NEC MobilePro by connecting the AC adapter. The color of the left side indicator light changes from amber to green when the battery is fully charged.

- Insert the plug on the AC adapter cable into the AC power port on the left side of the MobilePro.
- Plug the AC adapter into a working AC outlet.
- Power on the MobilePro.

## Taking a Quick Tour

- Open the MobilePro 780 display panel to start your system for the first time. Press the Power key if the unit does not start automatically.
- Follow the on-screen instructions to calibrate the touch screen. If necessary, press CTRL+ALT+EQUAL SIGN to recalibrate at any time.
- Be sure to enter your name, your local city, and set the clock for your local time.

## Introducing the Software

- **Microsoft® ActiveSync™** provides the communication link between your MobilePro and host PC. Install Microsoft ActiveSync on your host PC for data synchronization, file backup and restore, or to install new applications to your NEC MobilePro.
- **Windows® CE**, the operating system installed on your MobilePro, provides a variety of pocket applications specifically adapted for the mobile environment, a taskbar for easy navigation, and online networking and synchronization functions, all in a familiar Windows interface.
- The **Bonus Software CD** allows you to install additional software applications to optimize the use of your NEC MobilePro. The Bonus Software CD, designed for use on your host PC, works with Microsoft ActiveSync to install the applications of your choice onto your NEC MobilePro.

## Connecting to Your PC

Most users want to synchronize the MobilePro 780 with a desktop or notebook computer. In this mode, the MobilePro is a companion PC. The latest work done on either the MobilePro or the desktop automatically appears on both machines, once the synchronization process occurs. The following section provides an overview of the synchronization process. For detailed instructions, see Chapter 1 of the *NEC MobilePro 780 User's Guide*.

To configure your MobilePro for synchronization you must do the following:

- Verify the accuracy of the PC Connection default settings on your MobilePro.
- Ensure the availability of the serial port on your desktop or notebook computer.
- Connect the PC Connect cable to your desktop or notebook computer and to your MobilePro.
- Install Microsoft ActiveSync on your desktop or notebook computer.
- Create a partnership between your desktop or notebook computer and your MobilePro.
- Verify that the desired synchronization services are configured.

Microsoft ActiveSync automatically synchronizes your MobilePro with your PC's Microsoft Outlook™ or Schedule+ email, contacts, calendar, and task list each time you attach the PC Connect cable.

## Setting Up a Remote Connection

In addition to using your MobilePro as a companion PC, when you travel you can connect by modem directly to an internet service provider and a network remote access server, to get email and to view web pages.

Refer to Chapter 5, "Setting Up a Remote Connection," of the user's guide.
