

NEC PowerMate® VT 300 Series Celeron™ Processor Information

The new Intel® Celeron 500-MHz and 466-MHz processors shipping in some PowerMate VT 300 Series models are Socket 370 type Celeron processors. The 500-MHz and 466-MHz Celeron processors include 128 kilobytes of integrated L2 cache and a 66-MHz front side bus (FSB).

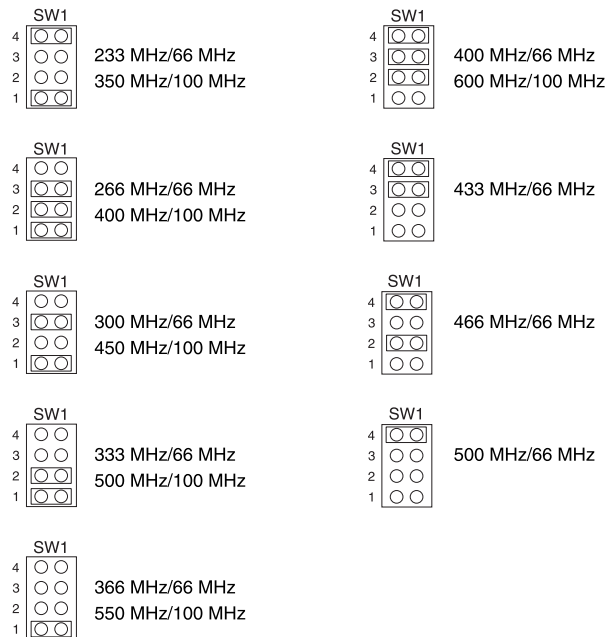

The processor upgrade information in the *NEC PowerMate VT 300 Series User's Guide* is for Slot 1 type Celeron processors and is *not* for Socket 370 type Celeron processors. User-installed upgrades for the Socket 370 type Celeron processors are not supported in the PowerMate VT 300 Series system.

Your version of the *NEC PowerMate VT 300 Series User's Guide* might not contain the jumper settings for the latest 500-MHz and 466-MHz Celeron processors. See the following figure for updated jumper information.

CAUTION

Processor jumpers on the system board are set correctly at the factory. Keep the jumpers at the factory settings.

Processor Jumper Settings
